Product Sheet

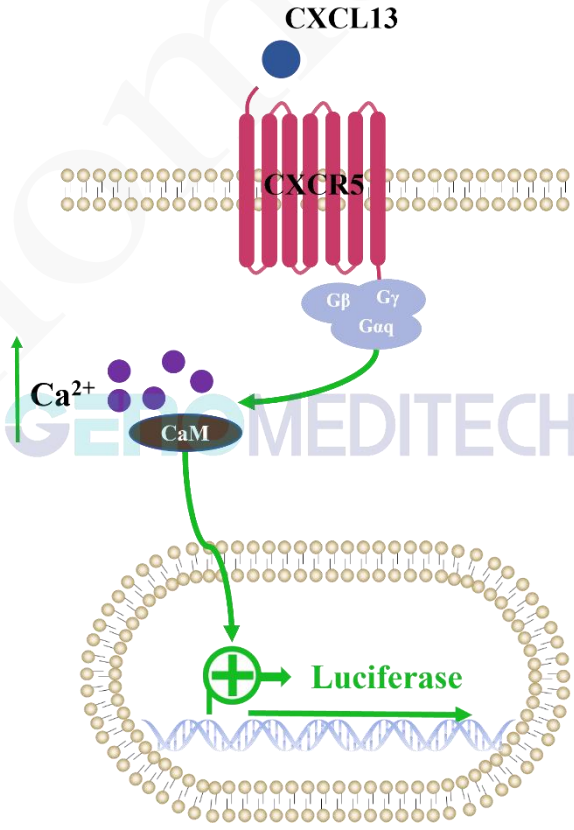
H_CXCR5 Gq Reporter CHO-K1 Cell Line

Catalog number: GM-C45289

Version 4.0.26.1023

CXCR5 (C-X-C chemokine receptor type 5, also known as BLR1 or CD185) is a G protein-coupled receptor (GPCR) primarily expressed in mature B cells and follicular helper T cells (Tfh). The CXCR5 receptor is involved in physiological and pathological processes, including B cell and Tfh cell homing to secondary lymphoid follicles, germinal center formation, and humoral immune responses. It specifically recognizes and binds to its cognate ligand, the chemokine CXCL13. CXCR5 is associated with certain autoimmune diseases, such as systemic lupus erythematosus and rheumatoid arthritis, as well as B-cell lymphomas and tumor tertiary lymphoid structures. Additionally, this receptor is implicated in tumor progression and chronic inflammation, making it a potential target of medical interest in immunotherapy, autoimmune disease research, and drug development.

H_CXCR5 Gq Reporter CHO-K1 Cell Line is a clonal stable cell line generated by lentiviral technology, constitutively expressing human CXCR5 with a Gq-coupled luciferase reporter. CXCL13 or agonist binding activates the Gq pathway and induces luciferase expression. Luciferase activity reflects pathway activation and enables in vitro evaluation of CXCR5-targeting compounds.



Specifications

Quantity	5E6 Cells per vial,1 mL
Product Format	1 vial of frozen cells
Shipping	Shipped on dry ice
Storage Conditions	Liquid nitrogen immediately upon receipt
Recovery Medium	F12K+10% FBS+1% P.S
Growth medium	F12K+10% FBS+1% P.S+4 μg/mL Blasticidin+4 μg/mL Puromycin
Note	None
Freezing Medium	90% FBS+10% DMSO
Growth properties	Adherent
Growth Conditions	37°C, 5% CO_2
Mycoplasma Testing	The cell line has been screened to confirm the absence of Mycoplasma species.
Safety considerations	Biosafety Level 2
Note	It is recommended to expand the cell culture and store a minimum of 10 vials at an early passage for potential future use.

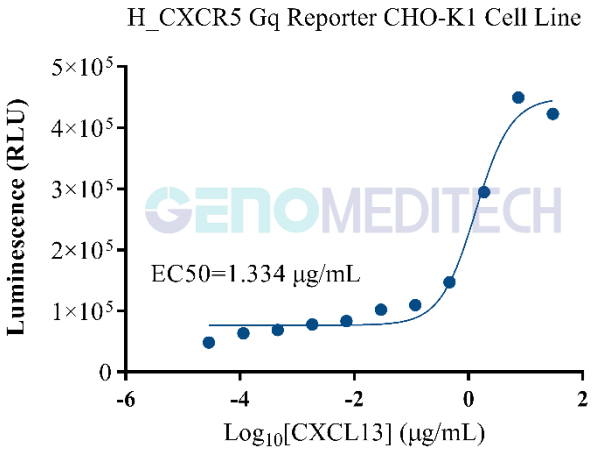
Materials

Reagent	Manufacturer/Catalogue No.
F12K	BOSTER/PYG0036
Fetal Bovine Serum	ExCell/FSP500
Pen/Strep	Thermo/15140-122
Blasticidin	Genomeditech/GM-040404
Puromycin	Genomeditech/GM-040401
96 well round cell culture plate	PakGent/CL-PT096
96-well White Opaque Plate	Thermo/236108
96-well U-bottom Plate	Saining/1014010
GMOne-Step 2.0 Luciferase Reporter Gene Assay Kit	Genomeditech/GM-040513
PE Rabbit anti-Human CD185/CXCR5 mAb (A26188)	abclonal/A26188

Genomeditech

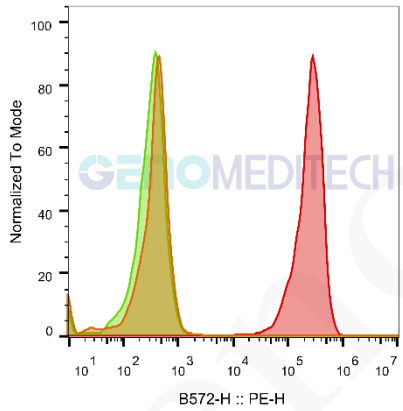
Data

Signaling Pathway



Response to BCA-1/CXCL13 Human. H_CXCR5 Gq Reporter CHO-K1 Cell Line (Cat. GM-C45289) was seeded at a density of 1E4 cells per well in a 96-well plate and incubated overnight. The next day, serial dilutions of the BCA-1/CXCL13 Human (Genscript/Z02826-20) were added to the pre-seeded cells. The mixture was incubated for an additional 6 hours. The firefly luciferase activity was measured using the Luciferase Reporter Assay Kit (Genomeditech). The maximum induction fold was approximately [12.0]. Data are shown by drug mass concentration.

Expression



SampleID	Geometric Mean : B572-H
CHO-K1 PE Rabbit anti-Human CXCR5 Ab	324
H_CXCR5 Gq Reporter CHO-K1 PE Rabbit M_IgG Ab	299
H_CXCR5 Gq Reporter CHO-K1 PE Rabbit anti-Human CXCR5 Ab	234922

H_CXCR5 Gq Reporter CHO-K1 Cell Line (Cat. GM-C45289) was determined by flow cytometry using PE Rabbit anti-Human CD185/CXCR5 mAb (A26188) (abclonal/A26188).

Cell Recovery

Recovery Medium: F12K+10% FBS+1% P.S

To insure the highest level of viability, thaw the vial and initiate the culture as soon as possible upon receipt. If upon arrival, continued storage of the frozen culture is necessary, it should be stored in liquid nitrogen vapor phase and not at -70°C. Storage at -70°C will result in loss of viability.

a) Thaw the vial by gentle agitation in a 37°C water bath. To reduce the possibility of contamination, keep the O-ring and cap out of the water. Thawing should be rapid (approximately 2 - 3 minutes).
b) Remove the vial from the water bath as soon as the contents are thawed, and decontaminate by dipping in or spraying with 70% ethanol. All of the operations from this point on should be carried out under strict aseptic conditions.
c) Transfer the vial contents to a centrifuge tube containing 5.0 mL complete culture medium and spin at approximately 176 x g for 5 minutes. Discard supernatant.
d) Resuspend cell pellet with the recommended recovery medium. And dispense into appropriate culture dishes.
e) Incubate the culture at 37°C in a suitable incubator. A 5% CO_2 in air atmosphere is recommended if using the medium described on this product sheet.

Cell Freezing

Freezing Medium: 90% FBS+10% DMSO

a) Centrifuge at 176 x g for 3 minutes to collect cells.
b) Resuspend the cells in pre-cooled freezing medium and adjust the cell density to 5E6 cells/mL.
c) Aliquot 1 mL into each vial.
d) Place the vial in a controlled-rate freezing container and store at -80°C for at least 1 day, then transfer to liquid nitrogen as soon as possible.

Cell passage

Growth medium: F12K+10% FBS+1% P.S+4 μg/mL Blasticidin+4 μg/mL Puromycin

For the first 1 to 2 passages post-resuscitation, use the recovery medium. Once the cells have stabilized, switch to a growth medium.

a) Remove and discard culture medium.
b) Briefly rinse the cell layer with PBS to remove all traces of serum that contains trypsin inhibitor.
c) Add 1.0 mL of 0.25% (w/v) Trypsin-EDTA solution to dish and observe cells under an inverted microscope until cell layer is dispersed (usually within 2 to 3 minutes at 37°C).
d) Note: To avoid clumping do not agitate the cells by hitting or shaking the flask while waiting for the cells to detach. Cells that are difficult to detach may be placed at 37°C to facilitate dispersal.
e) Add 2.0 mL of growth medium to mix well and aspirate cells by gently pipetting.
f) After centrifugation, resuspend the pellet and add appropriate aliquots of the cell suspension to new culture vessels.
g) Incubate cultures at 37°C.

Subcultivation Ratio: A subcultivation ratio of 1:4 - 1:5 is recommended

Medium Renewal: Every 2 to 3 days

Notes

a) After the stabilization of the cell condition, there will be fewer dead cells post-passage, the cell growth rate will tend to stabilize, cell morphology will become uniform, and the cells will appear robust.
