

Human ALPL Protein; His Tag

Product Information

Product Name	Human ALPL Protein; His Tag
Storage temp.	Store at \leq -70°C, stable for 6 months after receipt. Recommend to aliquot the protein into smaller quantities for optimal storage. Please minimize freeze-thaw cycles.
Catalog# / Size	GM-84418RP-100 / 100 µg GM-84418RP-1000 / 1 mg

Protein Information

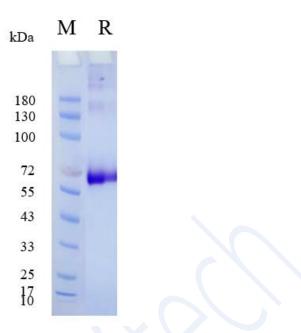

Alternative Names	AP-TNAP, APTNAP, HOPS, HPPA, HPPC, HPPI, HPPO, TNALP, TNAP,
	TNS-ALP, TNSALP
Source	Human ALPL Protein; His Tag (GM-84418RP) is expressed from human 293
	cells (HEK-293). It contains AA Leu18-Ser502 (Accession # P05186-1).
	This protein carries a His tag at the C-terminus.
Purity	> 95% as determined by SDS-PAGE
Endotoxin	< 1 EU/µg, determined by LAL gel clotting assay
Predicted Mol Mass	55.3 KDa
Formulation	Supplied as a 0.2 µm filtered solution of PBS, pH7.4.
Description	Tissue non-specific alkaline phosphatase (TNAP) is an isoenzyme of alkaline
	phosphatase encoded by the ALPL gene in the human body. TNAP is mainly
	present in tissues such as bone, liver, and kidneys. It plays a crucial role in bone
	by participating in the metabolism of phosphates and the mineralization process
	of the skeleton. Additionally, TNAP also plays a role in fetal development and
	growth. In clinical practice, the activity level of TNAP is also used as a diagnostic
	marker for bone diseases and liver diseases. Research also indicates that TNAP
	may play an important role in human diseases, including bone disorders such as
	osteoporosis and rickets, as well as other conditions such as cancer and
	inflammatory diseases. Tissue non-specific alkaline phosphatase (TNAP) is
	found in many different organs, but abundant in the skeletal, hepatic and renal
	tissues. TNAP is a homodimeric protein and in its structure, in addition to one
	phosphate anion, each monomer is composed of three metallic ions (one Mg2+
	and two Zn2+ cations). Each subunit contains an extended central core $\beta\mbox{-beach}$
	with α -helices, while an extended N-terminal α -helix has a "crown domain". The
	crown domain can be characterised as a loose interfacial loop with amino acid
	residues involved in stabilizing the binding of non-competitive inhibitors to the
	enzyme.
	Variant? 2 Partician Data 25/12/2022

Version:3.3 Revision Date:25/12/2023

SDS-PAGE

On SDS-PAGE under reducing (R) condition. The gel was stained overnight with Coomassie Blue. The purity of the protein is greater than 95%.

Bioactivity-ELISA

Human ALPL Protein; His Tag ELISA 0.1 µg Human ALPL Protein; His Tag of per well

Human ALPL Protein; His Tag (Catalog # GM-84418RP) was immobilized at 1 µg/ml (100 µL/well). Increasing concentrations of Anti-His mIgG2a Antibody (Catalog # GM-59493AB) were added.
