Description	B7H4 protein is a cell surface protein belonging to the B7/CD28 immune
	regulatory family. This protein plays a crucial role in regulating immune
	responses and tumor immune evasion. Overexpression of B7H4 is associated with
	the development and progression of various tumors, making it a potential target
	for cancer therapy. Additionally, B7H4 may also promote tumor immune evasion
	by influencing the function of other immune cells in the tumor microenvironment,
	such as inhibiting natural killer cells (NK cells) and regulatory T cells (Treg cells).

The B7H4 protein is of great interest in the fields of immunotherapy and tumor immunotherapy.
