Product Sheet

H_IL17A Reporter 293 Cell Line

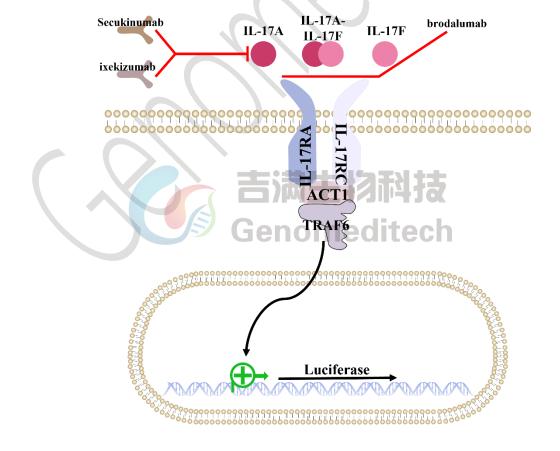

Catalog number: GM-C06721

Version 3.3.1.241122

IL-17 is a pro-inflammatory cytokine mainly produced by Th17 cells. It is crucial for immune defense against bacterial and fungal infections and is linked to autoimmune diseases like rheumatoid arthritis, psoriasis, and multiple sclerosis. The IL-17 family includes several members, with IL-17A and IL-17F being the most studied.

The IL-17 signaling pathway starts when IL-17 binds to its receptor, IL-17R, composed of IL-17RA and IL-17RC subunits. This binding activates downstream molecules like ACT1, which then activate the NF- κ B and MAPK pathways. These pathways increase the expression of pro-inflammatory cytokines and chemokines, enhancing inflammatory responses. The pathway also influences immune responses by affecting cell survival, proliferation, and differentiation.

H_IL17A Reporter 293 Cell Line is a clonal stable cell line constructed using lentiviral technology, constitutive expression of the IL-17RA, IL-17RC and some adapter membrane molecules, along with signal-dependent expression of a luciferase reporter gene. When IL-17A/F binds to IL-17R, it activates downstream signaling pathways, leading to the expression of luciferase. Blockade antibodies can inhibit this signal transmission. The luciferase activity measurement indicates the activation level of the signaling pathway and can thus be used to evaluate the in vitro effects of drugs related to IL-17.

Specifications

Quantity 5E6 Cells per vial,1 mL

Product Format 1 vial of frozen cells

Shipping Shipped on dry ice

Storage Conditions Liquid nitrogen immediately upon receipt

Recovery Medium EMEM(ATCC)+10% FBS+1% P.S

μg/mL Hygromycin+1.5 μg/mL Puromycin

Note Cells should be cultured using ATCC/30-2003 EMEM medium or Growth medium from

Genomeditech. The serum should be Cegrogen biotech/A0500-3010 or sourced from Gibco.

Freezing Medium 90% FBS+10% DMSO

Growth properties Adherent

Growth Conditions 37°C, 5% CO₂

Mycoplasma Testing The cell line has been screened to confirm the absence of Mycoplasma species.

Safety considerations Biosafety Level 2

Note It is recommended to expand the cell culture and store a minimum of 10 vials at an early

passage for potential future use.

Materials

Reagent	Manufacturer/Catalogue No.
EMEM	ATCC/30-2003
Fetal Bovine Serum	Cegrogen biotech/A0500-3010
Pen/Strep	Thermo/15140-122
Blasticidin	Genomeditech/GM-040404
Bleomycin	Genomeditech/GM-040407
Hygromycin	Genomeditech/GM-040403
Puromycin	Genomeditech/GM-040401
Recombinant Human IL-17A (C-6His)	Novoprotein/C774
Recombinant Human IL-17F (C-6His)	Novoprotein/CA22
Recombinant Human IL-25 (C-6His)	Novoprotein/C792
Anti-IL-17A hIgG1 Antibody(Secukinumab)	Genomeditech/GM-27267AB
Anti-IL17RA hIgG2 Antibody	Genomeditech/GM-47619AB
GMOne-Step Luciferase Reporter Gene Assay Kit	Genomeditech/GM-040503

Figures

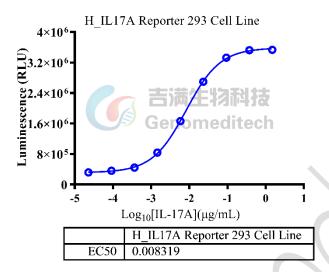

Figure 1 | Response to Recombinant Human IL-17A (C-6His). The H_IL17A Reporter 293 Cell Line (Cat. GM-C06721) at a concentration of 1.5E4 cells/well (96-well format) was stimulated with serial dilutions of Recombinant Human IL-17A (C-6His) (Novoprotein/C774) in assay buffer (EMEM(ATCC) + 1% FBS + 1% P.S) for 7 hours. The firefly luciferase activity was measured using the GMOne-Step Luciferase Reporter Gene Assay Kit (Cat. GM-040503). The maximum induction fold was approximately [11.2]. Data are shown by drug mass concentration.

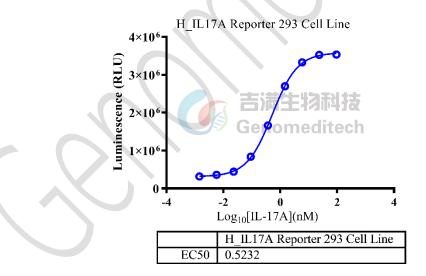

Figure 2 | Response to Recombinant Human IL-17A (C-6His). The H_IL17A Reporter 293 Cell Line (Cat. GM-C06721) at a concentration of 1.5E4 cells/well (96-well format) was stimulated with serial dilutions of Recombinant Human IL-17A (C-6His) (Novoprotein/C774) in assay buffer (EMEM(ATCC) + 1% FBS + 1% P.S) for 7 hours. The firefly luciferase activity was measured using the GMOne-Step Luciferase Reporter Gene Assay Kit (Cat. GM-040503). The maximum induction fold was approximately [11.2]. Data are shown by drug molar concentration.

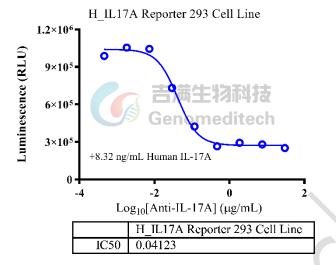

Figure 3 | Response to Anti-IL-17A hIgG1 Antibody(Secukinumab). Serial dilutions of Anti-IL-17A hIgG1 Antibody(Secukinumab) (Cat. GM-27267AB) was incubated with 0.832 ng/well of Recombinant Human IL-17A (C-6His) (Novoprotein/C774) for 1 hour in assay buffer (EMEM(ATCC) + 1% FBS + 1% P.S). After pre-incubation, add the mixture to the H_IL17A Reporter 293 Cell Line (Cat. GM-C06721) at a density of 1.5E4 cells/well in a 96-well format, and incubate for 6 hours. Firefly luciferase activity is then measured using the GMOne-Step Luciferase Reporter Gene Assay Kit (Cat. GM-040503). The results indicated maximum blocking folds of approximately [4.0]. Data are shown by drug mass concentration.

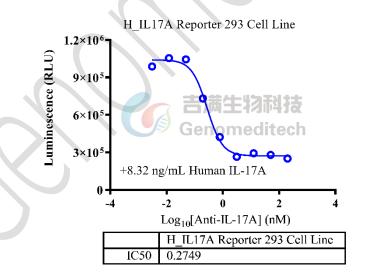

Figure 4 | Response to Anti-IL-17A hIgG1 Antibody(Secukinumab). Serial dilutions of Anti-IL-17A hIgG1 Antibody(Secukinumab) (Cat. GM-27267AB) was incubated with 0.832 ng/well of Recombinant Human IL-17A (C-6His) (Novoprotein/C774) for 1 hour in assay buffer (EMEM(ATCC) + 1% FBS + 1% P.S). After pre-incubation, add the mixture to the H_IL17A Reporter 293 Cell Line (Cat. GM-C06721) at a density of 1.5E4 cells/well in a 96-well format, and incubate for 6 hours. Firefly luciferase activity is then measured using the GMOne-Step Luciferase

Reporter Gene Assay Kit (Cat. GM-040503). The results indicated maximum blocking folds of approximately [4.0]. Data are shown by drug molar concentration.

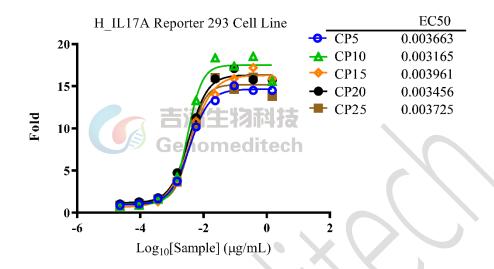

Figure 5 | The passage stability of response to Recombinant Human IL-17A (C-6His). The passage 5, 10, 15, 20 and 25 of H_IL17A Reporter 293 Cell Line (Cat. GM-C06721) at a concentration of 1.5E4 cells/well (96-well format) were stimulated with serial dilutions of Recombinant Human IL-17A (C-6His) (Novoprotein/C774) in assay buffer (EMEM(ATCC) + 1% FBS + 1% P.S) for 6 hours. The firefly luciferase activity was measured using the GMOne-Step Luciferase Reporter Gene Assay Kit (Cat. GM-040503). Data are shown by drug mass concentration.

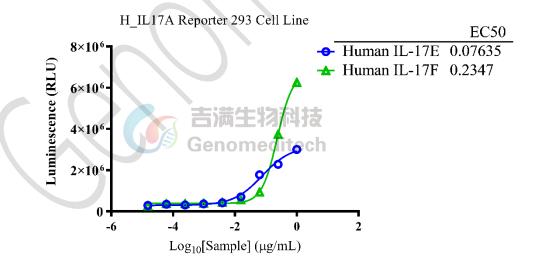

Figure 6 | Response to human IL-17F protein and human IL-17E protein. The H_IL17A Reporter 293 Cell Line (Cat. GM-C06721) at a concentration of 1.5E4 cells/well (96-well format) was separately stimulated with serial dilutions of Recombinant Human IL-17F (C-6His) (Novoprotein/CA22) and Recombinant Human IL-25(IL-17E) (C-6His) (Novoprotein/C792) in assay buffer (EMEM(ATCC) + 1% FBS + 1% P.S) for 16 hours. The firefly luciferase activity

Email: service@genomeditech.com

was measured using the GMOne-Step Luciferase Reporter Gene Assay Kit (Cat. GM-040503). The maximum induction fold was approximately [22.1] and [12.9], respectively. Data are shown by drug mass concentration.

SampleID	Geometric Mean : RL1-H
H_IL17A Reporter 293 H_IgG+APC-2nd Ab	149
H_IL17A Reporter 293 anti-IL17RA+APC-2nd Ab	2115

Figure 7 | H_IL17A Reporter 293 Cell Line (Cat. GM-C06721) was determined by flow cytometry using Anti-IL17RA hIgG2 Antibody(brodalumab) (Cat. GM-47619AB).

Cell Recovery

Recovery Medium: EMEM(ATCC)+10% FBS+1% P.S

To insure the highest level of viability, thaw the vial and initiate the culture as soon as possible upon receipt. If upon arrival, continued storage of the frozen culture is necessary, it should be stored in liquid nitrogen vapor phase and not at -70°C. Storage at -70°C will result in loss of viability.

- a) Thaw the vial by gentle agitation in a 37°C water bath. To reduce the possibility of contamination, keep the O-ring and cap out of the water. Thawing should be rapid (approximately 2 3 minutes).
- b) Remove the vial from the water bath as soon as the contents are thawed, and decontaminate by dipping in or spraying with 70% ethanol. All of the operations from this point on should be carried out under strict aseptic conditions.
- c) Transfer the vial contents to a centrifuge tube containing 5.0 mL complete culture medium and spin at approximately 176 x g for 5 minutes. Discard supernatant.
- d) Resuspend cell pellet with the recommended recovery medium. And dispense into appropriate culture dishes.
- e) Incubate the culture at 37°C in a suitable incubator. A 5% CO₂ in air atmosphere is recommended if using the medium described on this product sheet.

Cell Freezing

Freezing Medium: 90% FBS+10% DMSO

- a) Centrifuge at 176 x g for 3 minutes to collect cells.
- b) Resuspend the cells in pre-cooled freezing medium and adjust the cell density to 5E6 cells/mL.
- c) Aliquot 1 mL into each vial.

Order: +86 021-68455258/50432826/50432825

Toll-free: +86 400 627 9288 Email: service@genomeditech.com

d) Place the vial in a controlled-rate freezing container and store at -80°C for at least 1 day, then transfer to liquid nitrogen as soon as possible.

Cell passage

Growth medium: EMEM(ATCC)+10% FBS+1% P.S+3 μ g/mL Blasticidin+100 μ g/mL Bleomycin+100 μ g/mL Hygromycin+1.5 μ g/mL Puromycin

For the first 1 to 2 passages post-resuscitation, use the recovery medium. Once the cells have stabilized, switch to a growth medium.

- a) Remove and discard culture medium.
- b) Briefly rinse the cell layer with PBS to remove all traces of serum that contains trypsin inhibitor.
- c) Add 1.0 mL of 0.25% (w/v) Trypsin-EDTA solution to dish and observe cells under an inverted microscope until cell layer is dispersed (usually within 30 to 60 seconds at 37°C).
- d) Note: To avoid clumping do not agitate the cells by hitting or shaking the flask while waiting for the cells to detach. Cells that are difficult to detach may be placed at 37°C to facilitate dispersal.
- e) Add 2.0 mL of growth medium to mix well and aspirate cells by gently pipetting.
- f) After centrifugation, resuspend the pellet and add appropriate aliquots of the cell suspension to new culture vessels.
- g) Incubate cultures at 37°C.

Subcultivation Ratio: A subcultivation ratio of 1:3 - 1:4 is recommended

Medium Renewal: Every 2 to 3 days

Notes

- a) Upon initial revival, a higher number of dead cells and poor adherence are observed, which is normal. Adherence typically recovers within 2 3 days. After 2 3 passages, the proportion of adherent cells increases, and the cells begin to spread normally.
- b) After each passage, there may be 5 10% dead cells; however, as the number of passages increases, the recovery rate accelerates, the proportion of dead cells decreases, and the cell growth rate stabilizes.
- c) It is recommended to retain cell images after revival and during each observation to assist in assessing cell status. In case of abnormalities, promptly communicate with Genomeditech sales.
